4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **iptvsmartproviders.com** for a **Subscription E-Commerce & Canadian Streaming Service** site, generated on October 11, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

87/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Critical canonical domain mismatch: live apex domain redirects to www (308), but canonical tags and sitemaps point to apex
2. **Info:** Sitemap.xml contains 100% 308 redirected URLs due to apex domain base URL
3. **Info:** Exceptional content footprint with 63 specialized guides, achieving 93/100 quality score and 0 filler words
4. **Info:** Strong technical infrastructure: SSG static pre-rendering, modern HTTP security headers, and Cloudflare CDN proxy
5. **Info:** Advanced AI search readiness with valid llms.txt and high passage-level citability

Quick Wins:

1. Update baseUrl in config/site.ts and app/sitemap.ts to https://www.iptvsmartproviders.com to eliminate 308 redirect loops
2. Update canonical URL in app/layout.tsx and app/robots.ts to match the www version
3. Audit 2024/2025 titles in content/blog to update target year to 2026 for improved search snippet CTR
4. Add security.txt in public/.well-known/security.txt to clear Cloudflare Security Insights warning
5. Enrich author bio schema on blog posts to elevate E-E-A-T trust signals

2. Audit Categories

2.1 Technical SEO

Score: 78/100

What Works

- HSTS with preload and max-age=31536000 enabled
- Strict Content Security Policy (CSP) and clickjacking protection
- Crawl budget protection via robots.txt disallowing /checkout and /api/
- 97 static pages pre-rendered with zero runtime lag

Findings

Canonical Redirect Loop (Apex vs WWW) Critical

https://iptvsmartproviders.com redirects via 308 Permanent Redirect to https://www.iptvsmartproviders.com/. However, the HTML canonical tag on www points back to apex, creating an indexing contradiction.

Recommendation: Update siteConfig.url, metadataBase, and sitemap baseUrl to 'https://www.iptvsmartproviders.com' to match the live canonical domain.

Sitemap URLs Contain Redirected Endpoints High

All URLs listed in sitemap.xml point to https://iptvsmartproviders.com. Search engines encounter a 308 redirect on every sitemap crawl.

Recommendation: Change baseUrl in app/sitemap.ts and app/robots.ts to use the canonical www host.

Missing security.txt Discovery File Low

RFC 9116 security.txt is absent, triggering an alert in Cloudflare Security Insights.

Recommendation: Add public/.well-known/security.txt with contact details and encryption keys.

2.2 Content Quality & E-E-A-T

Score: 88/100

What Works

- Comprehensive knowledge base with 63 dedicated articles
- Pillar post 'best-iptv-canada.md' scores 93/100 quality with 0 filler and 0.83 information density
- Deep troubleshooting and hardware guides for Canadian users

Findings

Outdated Year References in Legacy URLs Medium

Several legacy posts reference 2024 and 2025 in titles and slugs, dampening CTR for users searching for current 2026 providers.

Recommendation: Update H1s and title tags to emphasize 2026 reviews, with internal redirects maintaining link equity.

Generic Author Credentials in Metadata Medium

Blog posting schemas reference 'IPTV Canada' without named authors or industry verification bios.

Recommendation: Introduce author profiles with specialized streaming technology credentials to reinforce E-E-A-T.

2.3 On-Page SEO

Score: 92/100

What Works

- Homepage title and meta description optimized with Canadian geo-modifiers and year tokens
- Clean heading outline with 1 H1, 10 H2s, and 18 H3s
- Dynamic OpenGraph and Twitter cards generated with custom SVG/PNG images

Findings

H1 Spacing Rendering Artifact Low

The homepage H1 contains a <br /> tag without spacing, rendering in text extractors as 'Best IPTV CanadaService In 2026'.

Recommendation: Add a space before or after the break tag in Hero.tsx.

2.4 Schema / Structured Data

Score: 90/100

What Works

- Organization and WebSite SearchAction schemas configured
- Product schema with Offer tiers in CAD currency
- FAQPage schema and BreadcrumbList structured data implemented
- LocalService schema on all 10 Canadian city landing pages

Findings

> **Schema Target URLs Point to Non-Canonical Host** Medium
>
> Organization, WebSite, and Offer schema URLs use apex domain rather than canonical www domain.
>
> **Recommendation:** Update URL properties in lib/schemas.ts to use canonical domain.

2.5 Performance (Core Web Vitals)

Score: 86/100

What Works

- Zero CLS from Next.js self-hosted Google Fonts
- Cloudflare edge caching and Zstandard HTTP compression
- Lightweight DOM footprint with Next.js Turbopack build optimization

Findings

> **Third-Party Unsplash Image Optimization** Medium
>
> Hero section pulls imagery from Unsplash; ensure next/image sizes attributes match mobile breakpoints to prevent over-fetching.
>
> **Recommendation:** Review responsive sizes attributes on external images.

2.6 AI Search Readiness (GEO)

Score: 94/100

What Works

- public/llms.txt file is already active and structured per standards
- Clear bullet-pointed feature matrices and pricing tables
- Structured FAQ data ready for LLM retrieval

Findings

> **llms.txt Canonical URL Mismatch** Low
>
> Canonical URL in llms.txt points to apex domain instead of www.
>
> **Recommendation:** Update canonical URL in public/llms.txt to https://www.iptvsmartproviders.com.

2.7 Local SEO (Canada)

Score: 92/100

What Works

- 10 targeted city landing pages (Toronto, Vancouver, Montreal, Calgary, Ottawa, etc.)
- Local ISP references (Bell Fibe, Rogers Ignite, Telus, Shaw)
- Local sports team tie-ins (Maple Leafs, Canucks, Oilers, Flames)

Findings

> **City Landing Page Internal Link Expansion** Low
>
> City landing pages are currently linked mainly in the footer. Contextual links in blog posts would enhance geographic relevance.
>
> **Recommendation:** Add contextual links to city pages in Canadian internet provider and regional sports guides.

---

3. Action Plan

Phase 1: Critical Technical Fixes (Immediate) Day 1 - 2

- Standardize canonical host: Update config/site.ts and app/layout.tsx to www.iptvsmartproviders.com
- Regenerate sitemap.xml with www.iptvsmartproviders.com URLs to eliminate 308 redirects
- Fix robots.txt Sitemap directive to point to www sitemap
- Create public/.well-known/security.txt to clear Cloudflare Security Insights

Phase 2: On-Page & Schema Alignment Week 1

- Update all schema generators in lib/schemas.ts to canonical www domain
- Fix spacing in homepage H1 header in Hero.tsx
- Update public/llms.txt canonical URL to www host

Phase 3: Content Freshness & E-E-A-T Elevation Weeks 2 - 3

- Audit and update legacy 2024/2025 blog titles to 2026
- Add structured author bio cards to blog posts to elevate E-E-A-T
- Insert internal links from Canadian sports guides to corresponding city landing pages

Phase 4: Monitoring & Ongoing SEO Governance Monthly

- Monitor Google Search Console indexation for www migration stabilization
- Run claude-seo drift comparison on deployments to guard against SEO regressions
- Track Core Web Vitals field data via Vercel Speed Insights

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
